Kansas Fire Incident Reporting System

Kansas fire departments are required under K.A.R 22-5-1 to submit a report for each incident where a response is made by that fire department, regardless of the call type or actions taken on the call. Also included in the requirements are reports for any fire service casualty, injury or death, that occurs while acting in an official role a call, responding to a call, drilling, at the station, etc. Firefighter injuries caused by equipment failures are heavily scrutinized to continue improving the safety of our Fire Service.

Kansas does not have a central repository of fire reports. Instead, reports received at the Office of the State Fire Marshal are uploaded directly into the National Fire Incident Reporting System (NFIRS) housed at the National Fire Data Center (NFDC) at the U.S. Fire Administration (USFA). Each year, the USFA releases the most comprehensive reference on the nature and scope of the fire problem in the United States, *Fire in the United States*. The agencies and departments participating in the NFIRS make the publication possible.

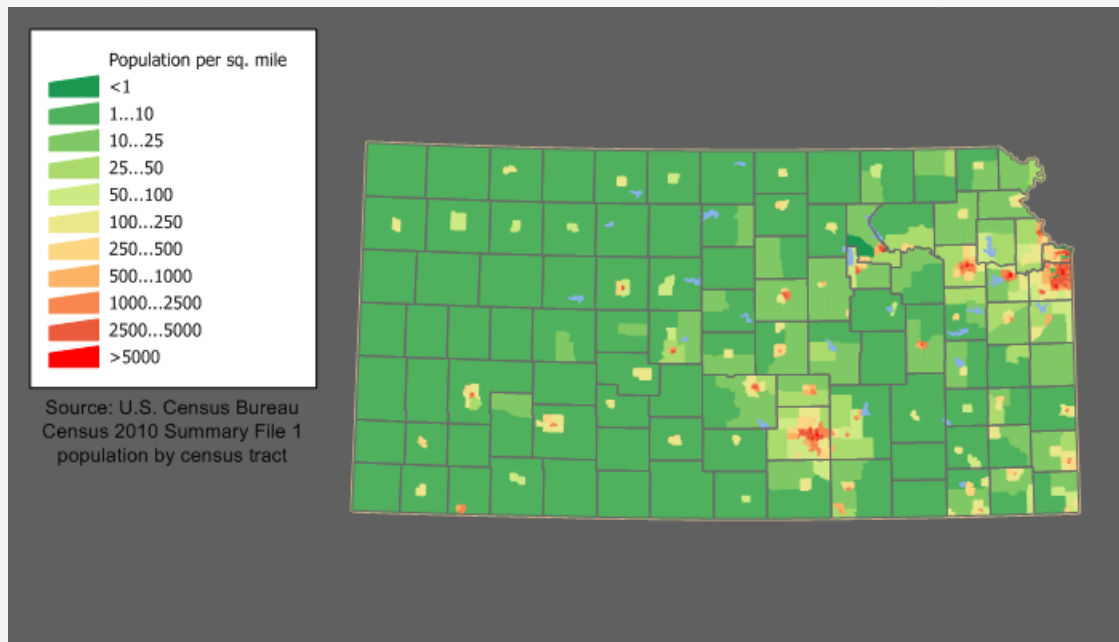

In addition to publications, the data can highlight current and emerging trends for more than fires. A variety of different public safety groups use the information to drive improvements through regulation, creating better equipment, training, education, product recalls, and funding. Data can help departments focus training for their particular geography and population, justify budget needs, allocate resources, and provide better coverage.

Kansas continues to increase its total reporting fire departments and 75% of fire departments reported at least once during 2013. Of those, 31% reported at least one report for each month. When examining the statistics and information contained in this report, refer to the comprehensive Appendix A: Reporting History for a complete reporting breakdown for each fire department. All statistics were current as of 12/12/2014.

*Human behavior flows from three main sources:
desire, emotion, and knowledge.*

Kansas Population Map

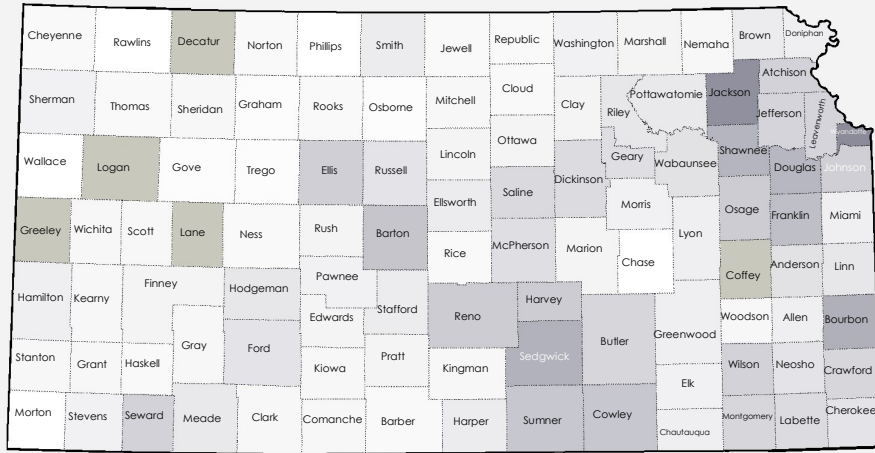

Kansas Homeland Security Regions

To maintain clarity among different entities, the Kansas Fire Incident Reporting System utilizes the same regions as the Homeland Security regions. When regions are referenced in this document, refer to the map below for clarification.

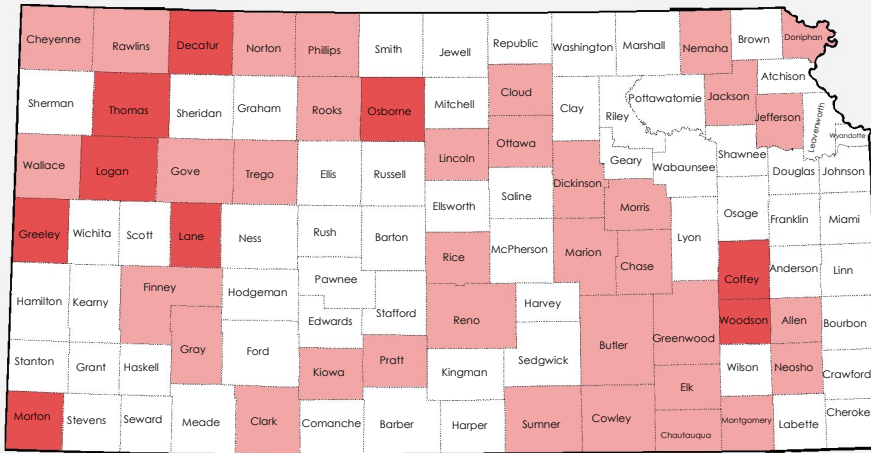

Calls per Population

Using estimated 2013 population from the U.S Census, the map and table depict call volume divided by population. Decatur, Greeley, Lane, Logan, and Rawlins County did not report any calls for service during 2013. The white to darkest grey color scale depicts low to high ratios of call volume to population. Ratios may be incorrect due to non-reporting departments.

Reporting Per County

In 2013, there were 633 fire departments with an Active status. Of those, 478 reported at least once during the year. Refer to Appendix A: Reporting History to view the full list. The color assigned to each county depicts the participation rate of fire departments in a county: 0-25% in dark red, 26-74% in light red, 75-100% in white.

County	FDID's	Reporting	Total	County	FDID's	Reporting	Total	County	FDID's	Reporting	Total

Reports Submitted per County

The map and table depict the total submitted reports for each county. A color scale of white (1 report) to darkest grey (60,377 reports) is used on the map. Coffey, Decatur, Greeley, Lane, Logan, and Rawlins County did not report any calls for service.

Top Fire Trends

The Top 5 Fires have remained constant since 2010 but large increases were seen in vegetation-related fires in 2011 and 2012. The numbers have normalized in 2013. Building fires have slowly declined in the same time period.

Fire Type	2010	2011	2012	2013
1. Building fire	3,461	3,995	3,797	3,595
2. Grass fire	3,388	5,773	5,617	2,645
3. Passenger vehicle fire	1,626	1,548	1,642	1,424
4. Brush, or brush and grass mixture fire	1,306	2,426	2,486	1,270
5. Outside rubbish, trash or waste fire	696	755	945	762

More Than Fire

The Kansas Fire Incident Reporting System can provide unique insight into the call volume for different types of services. Gone are the days when fire departments were mainly called to extinguish hostile fires. Today's Fire Service has a closet full of hats: first responder, traffic control, land search, water rescue, extrication, weather watch, vehicle accident cleanup, bomb scares, HazMat control, public assistance, animal rescue, downed power lines, stuck jewelry, smoke removal, educators, and many more.

Today's breakdown of call categories in Kansas includes 66% EMS/Rescue calls, 11% Assist/Good Intent calls, 7% Service calls, 6% Fire calls, 6% False Alarm calls, and 4% Hazardous Condition calls. Weather calls and Explosion calls each comprise less than 1% of the call volume.

More than Fire, Continued

Call volume ratios are not consistent in all areas of the State. Some counties have lower EMS rates because some fire departments do not respond to medical calls. Counties that did not report any calls for service are not represented in the below table.

Note: “Exp” is the NFIRS abbreviation for Explosion calls.

County	Assist	EMS	Exp	False	Fire	Hazard	Service	Weather	County	Assist	EMS	Exp	False	Fire	Hazard	Service	Weather

Each fire department is required to submit Fire Service Casualties if any personnel are injured in the course of their duties. If the personnel are not on a current call but are still on duty performing activities for the fire department such as department-sanctioned training and station activities, a new report is submitted. Otherwise, if the personnel are on a call the Fire Service Casualty information is added to the existing call report. The Fire Service Casualty module is also used to report exposures to harmful toxins or physical agents, regardless of the presence of symptoms.

In the year 2013, Kansas did not have any reported Fire Service fatalities. There were 259 reported instances of injuries and exposures.

Fire Service Casualties, Continued.

Injury Severity

Fire Service Casualties, Continued.

Calls that occur between 8am-9am comprise 4% of total calls but more fire service injuries occur during the same period making it the most likely time for a fire service injury.

No particular day of the week accounts for more injuries than another. January accounts for 12% of injuries followed by April with 11% and June with 10%. In contrast, total call volume remains constant throughout the months at a steady 8% with only July rising to 10% of total calls.

Fire Service Casualties, Continued.

While it is well established that male Fire Service members comprise the majority of the Kansas Fire Service, the exact proportion of male to female members is unknown.

Male Fire Service Injuries

228 Injuries

With 88% of total injuries attributed to male Fire Service members, over 57% of those injured did not result in any time lost. Exposure reports comprised 36% of injuries followed by 21% of injuries being treated by a physician without any time off being required.

Men are most likely to suffer strains and sprains (28% of injuries), Pain only (14%), and Undetermined injuries (11%).

Only men were reported injured by roof collapse (2 men).

Injuries to men are most often caused by Overexertion (21%).

Men are most likely to injure knees (12%), shoulders (9%), and backs (8%).

Men are highly likely to suffer strains/sprains but less likely to suffer fractures, puncture wounds, and disorientation.

40% of men injured were transported to the hospital

Female Fire Service Injuries

31 Injuries

While less female Fire Service members are reported with injuries, women are more likely to suffer Moderate injuries with lost time in 68% of cases and Severe injuries which 3 women reported.

Women are less likely to suffer strains and sprains but are more likely to suffer burns, bruises, and lacerations.

Only women were reported injured by a floor collapse (2 women).

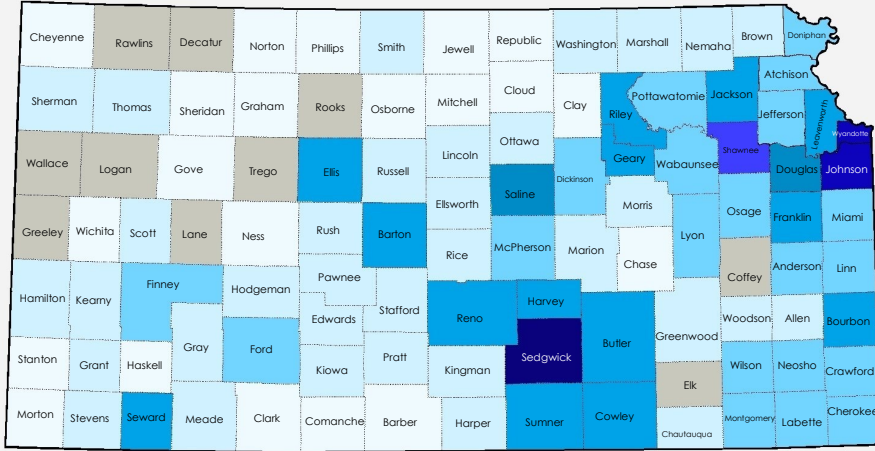

Injuries to women are most often caused by a fall (26%).

Women are most likely to injure hands (13%), knees (10%), and “No body part” (10%).

Women are less likely to suffer strains/sprains but are more likely to suffer burns, bruises, and lacerations.

80% of women injured were transported to the hospital.

66%: 150,805 EMS/Rescue Calls

The call volume of our fire service is dominated by Emergency Medical Services, even though many fire departments do not actually transport patients to the hospital. During a Medical Assist call, a fire department does not provide patient care but assists a crew outside the fire department. Common actions on assist calls are removing barriers, establishing traffic control or safe areas, lifting patients, and extrication.

Vehicle Accident Calls by Month

11%: 25,585 Assist Calls

The Assist category includes calls of “Good Intent” which means anon-malicious alarm was received and there was no incident that required mitigation. Included are controlled burns, smoke scares, and the most prevalent Dispatched and Canceled En-route. Dispatched and Canceled En-route accounts for 6% of all calls and ranks third highest for all call types, regardless of category.

Assist Calls take up roughly 6,600 hours with 3,172 reported hours on calls that ended in cancelation.

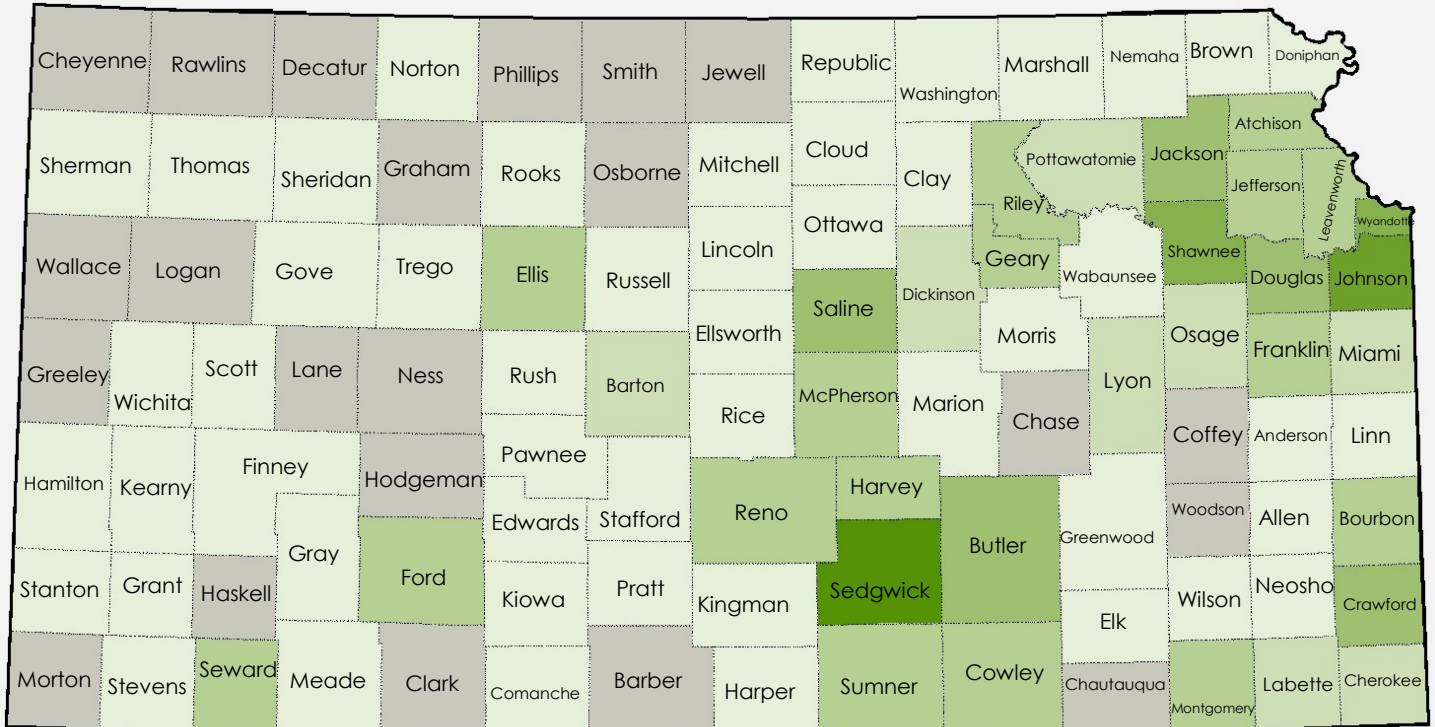

Call Type	KC-Metro	N. Central	NE	NW	S. Central	SE	SW	Total

7%: 15,041 Service Calls

Service Calls are often paged as EMS calls but result in no EMS care given. The most common Service call is Assisting an Invalid which usually consists of helping a person from one location to another within a residence and checking the welfare of a citizen.

Other Service Calls include assistance to the public, police, or other governmental agency. Usually these types of Service calls are a request for equipment and manpower such as lights and barricade removal.

6%: 14,038 Hostile Fire Calls

It is difficult to assess historical call volume shifting from fires to EMS given original reporting systems were focused on fire calls only. However, 15 years ago there were 15,543 hostile fires reported, indicating a slow decline in total fires throughout the state. Hostile fire do not include controlled agricultural burns.

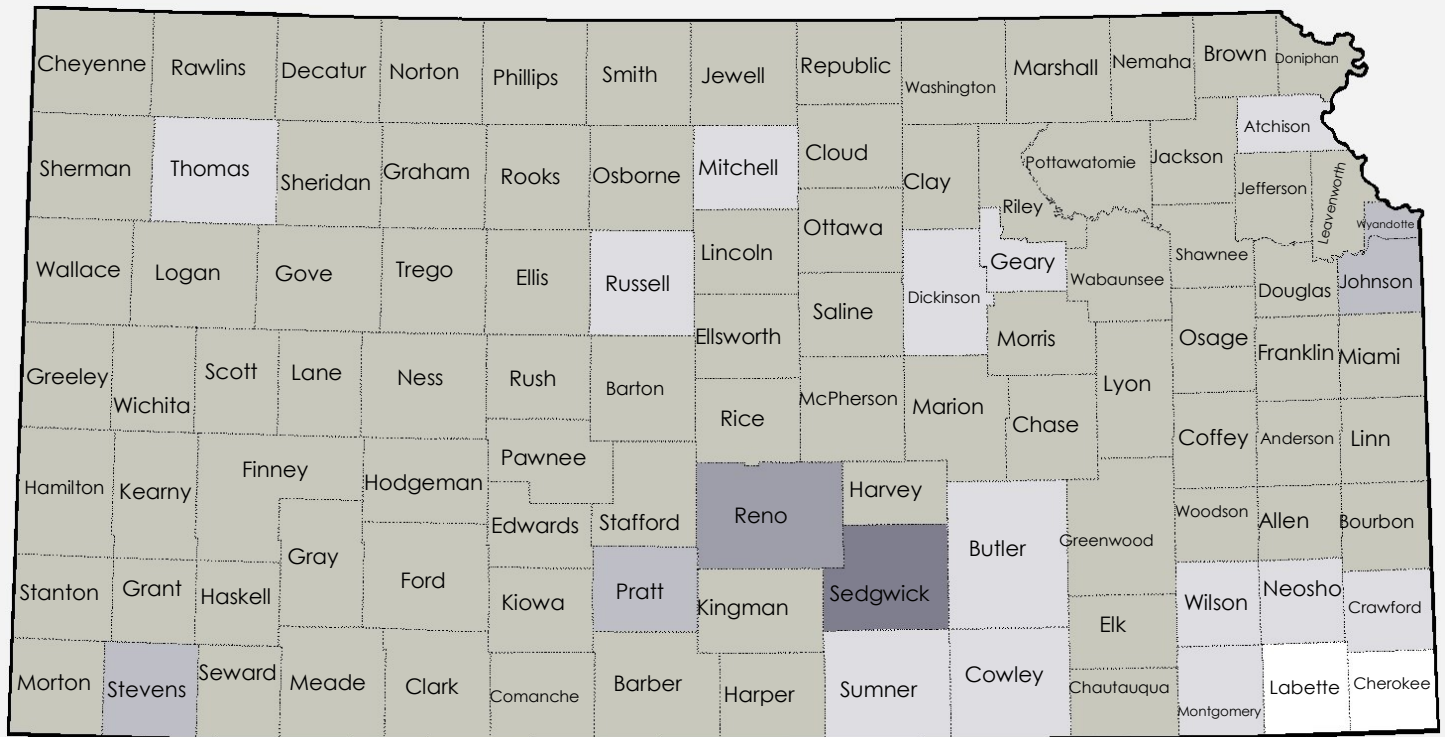

Call Type	KC-Metro	N. Central	NE	NW	S. Central	SE	SW	Total

Hostile Fires, Continued

By NFIRS definition, giving or receiving aid requires two criteria to be met: 1) a fire department must be aiding or receiving aid from another fire department and 2) both fire departments must make the scene of the call. Mutual aid is requested for a particular call based upon the known need for equipment, size of call, and type of call. Automatic Aid agreements require fire departments to respond with the original fire department without being requested.

Call Type	Automatic Aid		Mutual Aid		Other aid given	None
	Given	Received	Given	Received

Civilian Fire Deaths, Continued.

Not including Undetermined heat sources, cigarettes were the most prevalent heat sources for fatal fires. Abandoned or discarded materials started fires that resulted in six deaths. Fatal fires occur in residences 78% of the time. The remaining fatal fires occurred in vehicles on the roadway or in an open outside area.

Smoke detectors were reported as “None” for 7 fatalities and “Undetermined” for 6 fatalities. For the remaining 18 fires that occurred in residences, 2 fatalities were marked “Detector Failed to Operate”, 6 were marked “Detector Operated”, and 10 were marked “Undetermined.” When smoke detectors failed it was 100% due to missing batteries.

Equipment-Involved Fires

Equipment was reportedly involved in 1,533 fires. Of those fires, there were 8 fatalities and 45 injuries. The most common reason for equipment involvement was a failure or malfunction of an electrical component of the equipment, followed by mechanical failure, short-circuit, and placement of equipment too close to combustibles. Animals can cause an equipment-involved failure, e.g. rat nest in electrical wiring. Natural causes such as high wind, lighting, and storms cause a high amount of electrical component equipment, power line, and transformer fires.

Preventable Fires

Human Factors were listed in 1,001 fires in 2013. Unattended or Unsupervised Person(s) were involved in 630 fires. There were 89 fires reporting Age was a Factor. Human factors were present in 6 fatalities and 36 injuries. Unattended persons caused the most injuries.

Not counting Arson, Cooking ranks highest in fire causes for preventable fires with 834 fires, 3 fatalities, and 32 injuries.

A total of 317 fires were marked with Smoking as the fire cause, causing 5 fatalities and 13 injuries.

Fireworks caused 310 unintentional fires and were reported as the heat source for a total of 393 fires, including Arson fires.

Candles were reported as the heat source for 50 fires and 4 injuries.

Abandoned or discarded materials caused the ignition of 400 fires, resulting in 6 deaths and 14 fires.

Heat sources close to combustible materials caused the ignition off 320 fires with 4 deaths and 14 injuries.

Misusing materials and products caused the ignition of 183 fires with 1 death and 4 injuries.

Playing with heat sources caused the ignition of 102 fires with 1 death and three injuries.

Cutting and welding too close to combustible materials caused the ignition of 67 fires resulting in one injury.

Failure to clean caused 64 equipment related fires.

Improper storage or containers caused 45 fires.

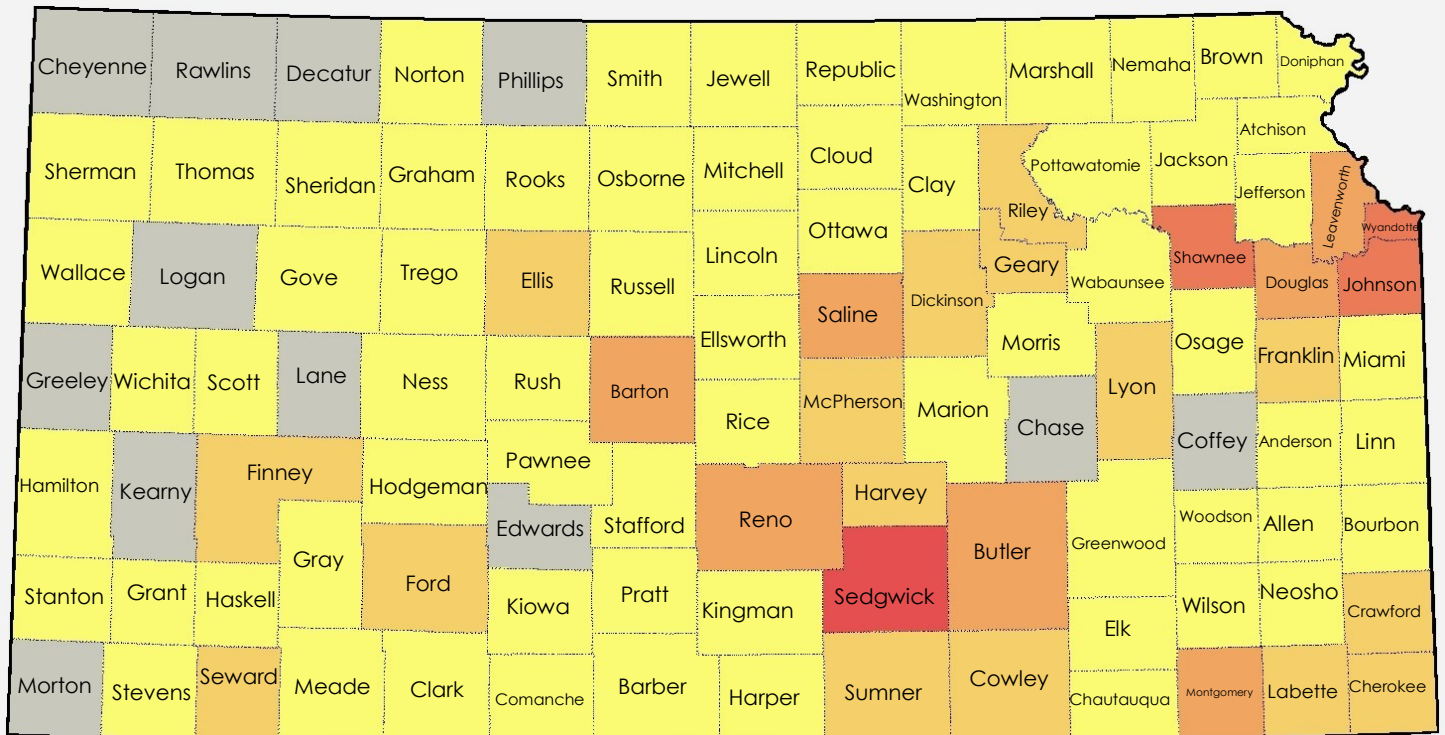

24% of all Building Fires were Cooking related.

Structure Fires

Mutual aid is included in the numbers for the map and table. Fires in structures other than buildings include bridges, power lines, and other man-made constructs that are not buildings with walls and roofs. A total of 4,861 fires were reported in the Structure Fire category. This is down from 5,562 reported in 2012.

Note: Cooking Fire refers to a cooking related fire that did not spread to the structure. Once a fire spreads to the structure itself, the Fire Type changes to Building Fire.

Fire Type	KC-Metro	N. Central	NE	NW	S. Central	SE	SW	Fatalities	Injuries

Structure Fires By Month and Day of Week

July 5th, a Friday, was the busiest day of the year for structure fires, followed by July 4th. New Year's Day was the third busiest day.

Smoking fires, arson fires, and cooking fires all peak on Mondays.

Fires started by clothes dryers peak on Sundays and Wednesdays.

Heating fires are most prevalent on Fridays from 6pm-8pm. December and January comprise 41% of heating related fires.

Structure fires are most prevalent during the hour from 6pm to 7pm.

Vegetation Fires

With 4,860 vegetation related fires, Grass Fires topped the year at 2,645 fires. Over 20,190 acres were burned and damaged at least 39 structures. The largest fire burned 450 acres. The most damaging vegetation related fire caused an estimated \$4,000,000 loss of stored corn stover.

Not included in the below numbers are responses to Controlled Fires, both authorized and unauthorized.

Fire Type	KC-Metro	N. Central	NE	NW	S. Central	SE	SW	Fatalities	Injuries
Grass fire	190	193	688	101	957	355	161	1	2

Cultivated vegetation, crop fire, other	4	19	26	5	59	12	16	0	0
Forest, woods or wildland fire	8	4	35	6	39	15	3	0	0
Cultivated trees or nursery stock fire	2		7		4	1	2	0	0

Vegetation Fires by Month and Day of Week

July 4th was the busiest day for vegetation related fires with July 5th coming second with 50% of the fires attributed to Fireworks.

Arson accounts for at least 13% of vegetation fires and is most common on Saturdays

40% of all vegetation related fires have an undetermined heat source.

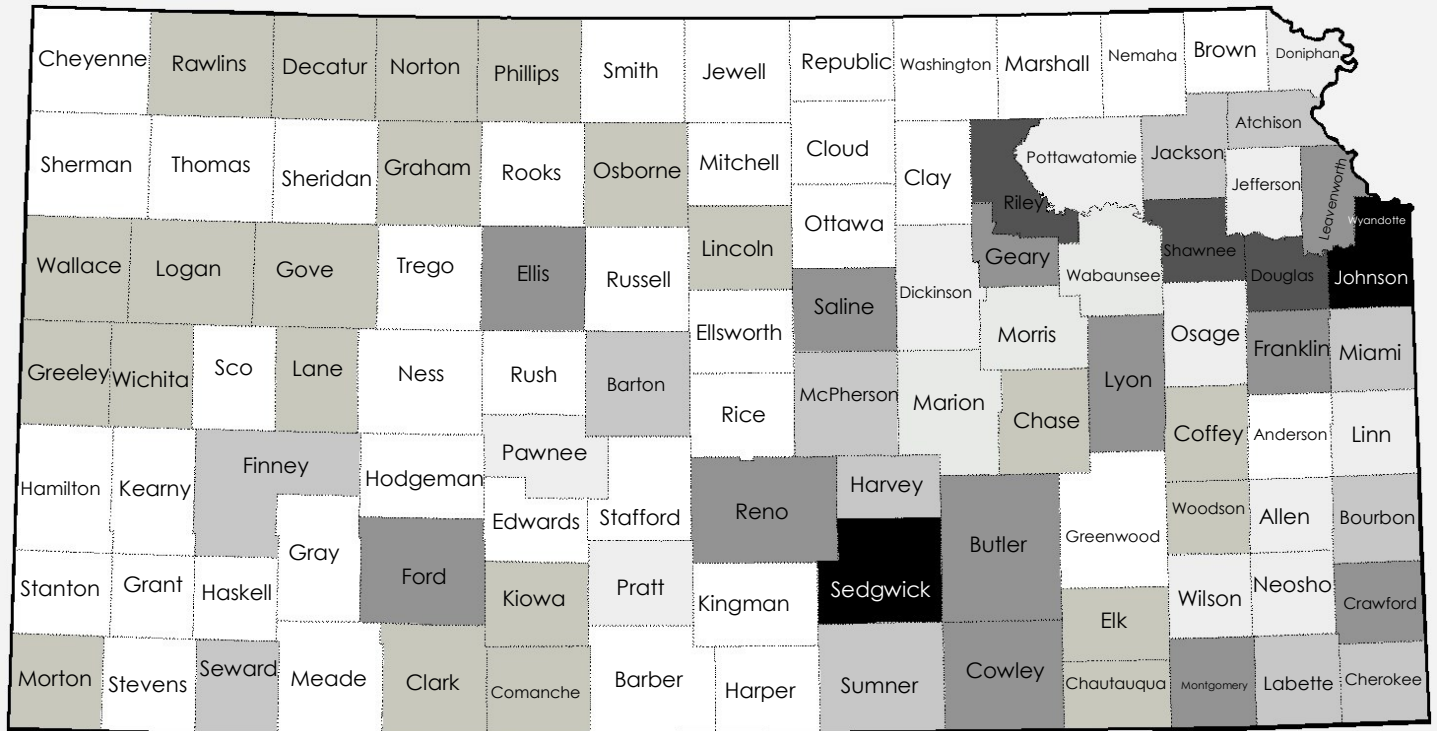

Wind is the most common suppression factor when battling vegetation fires, followed by drought or low fuel moisture.

Vegetation fires are most prevalent during the hours of 2pm-4pm.

6%: 13,154 False Calls

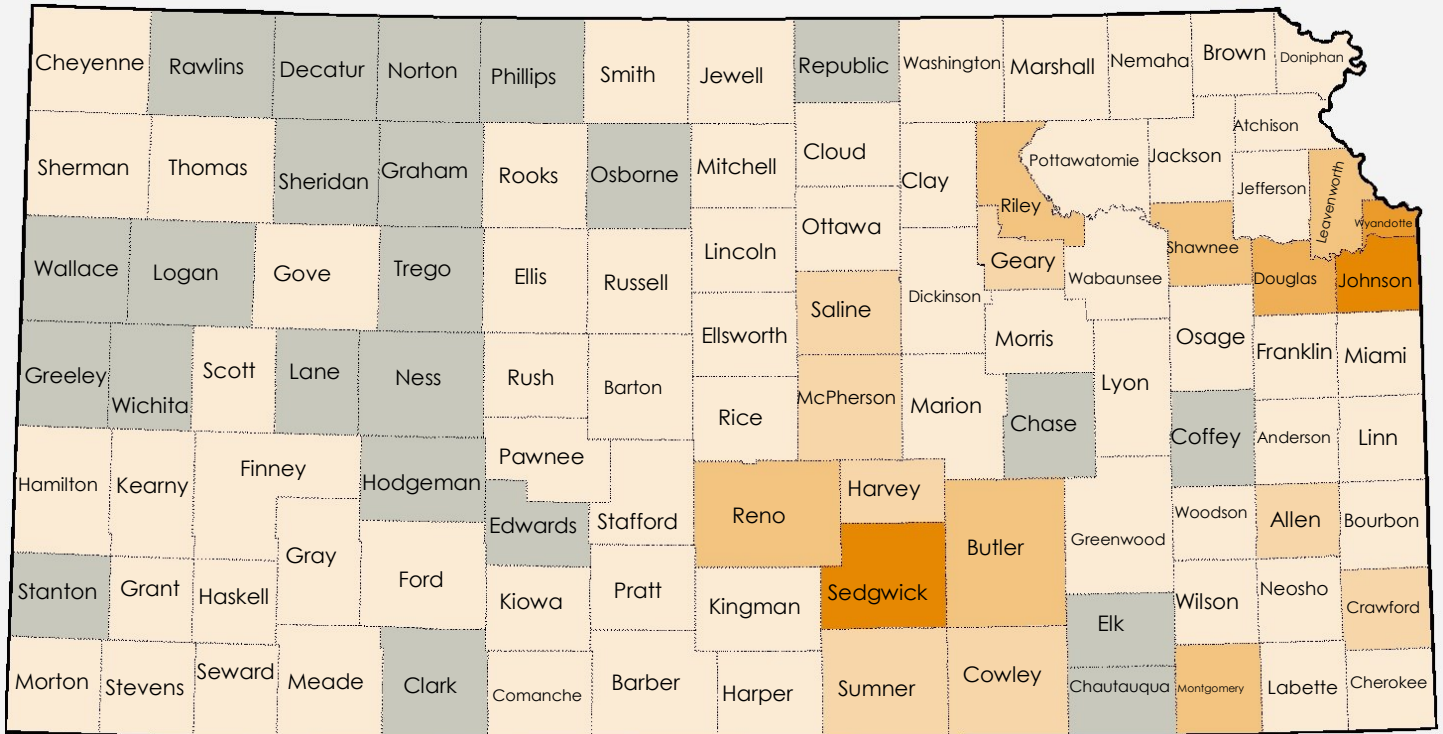

Over 4,200 hours were reported by fire departments on False Calls. July accounts for the highest amount of False calls followed by December. Most False calls are received between 9am and 3 pm.

<1%: 392 Explosion/Overpressure Calls

The National Fire Incident Reporting System lacks an Explosion module, making detailed information about the call difficult to obtain. Explosion and Overpressure calls remain constant throughout the year with July being the exception when Fireworks Explosions push the call volume higher. Fireworks explosions mainly occur from 8pm-10pm.

Excessive heat, scorches mainly occur from 6pm-9pm, possibly due to cooking.

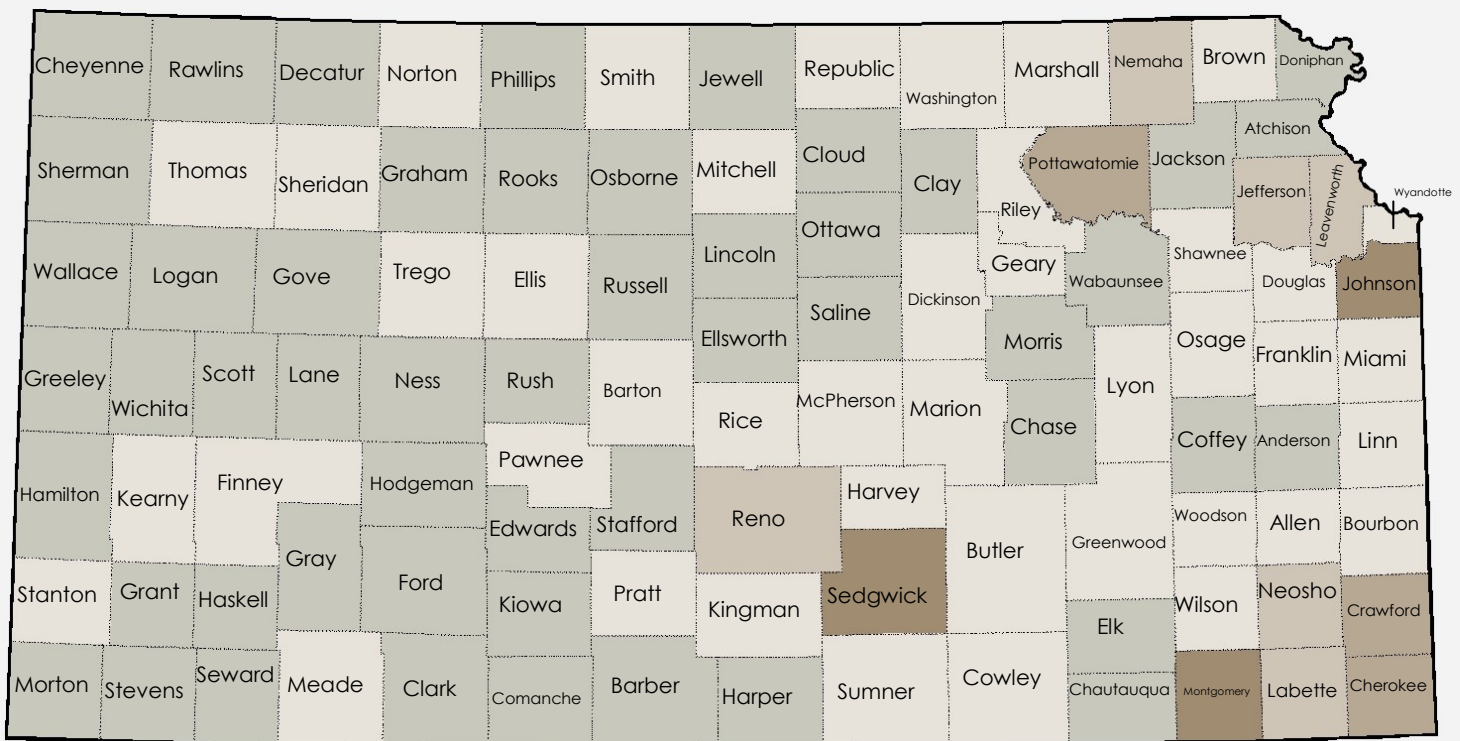

Call Type	KC-Metro	N. Central	NE	NW	S. Central	SE	SW	Total
Excessive heat, scorch burns with no ignition	65	14	46	5	79	12	7	228
Overpressure rupture, explosion, overheat other	13	1	8	3	6	5	2	38

Steam rupture of pressure or process vessel					2			2
Chemical reaction rupture of process vessel	1		1					2
Overpressure rupture of boiler from air or gas					1			1

<1%: 379 Weather Calls

According to data from the National Climatic Data Center, Kansas has averaged 96 tornadoes a year over the last 20 years which peak in May with an average of 38 tornadoes. It's no surprise that May was the busiest weather month clocking 184 reports. The amount of reports does not adequately describe the work Kansas fire departments put in during Tornado Season. Often, only one report is made to cover multiple trucks and crews roving throughout jurisdictions. Many weather calls extend beyond 24 hours and often include volunteers sleeping at the fire station that wouldn't normally spend the night.

Many weather related calls are captured in the Hazardous Condition category. In example, downed power lines from ice storms are reported in the Hazardous Condition category under Power Line Down.

Call Type	KC-Metro	N. Central	NE	NW	S. Central	SE	SW	Total
Severe weather or natural disaster standby	16	7	56	5	16	69	1	170
Lightning strike (no fire)	23	1	16	1	25	11	3	80

Severe weather or natural disaster, other	2		7	3	6	26	6	50
Flood assessment	5		1		7	1		14

Appendix A: Reporting History

The following table provides the reporting history for each fire department in Kansas with an Active status. Due to departments combining, splitting, or becoming inactive this should not be used as the most current list of operating fire departments.

Months marked “NA” were reported by the fire department as having no calls for service or No Activity. Months with a “o” are months that a fire department did not report and should not necessarily be interpreted as the fire department had no calls for service.
